ENGINEERING ONLINE

The College of Engineering established distance engineering programs in 1978. Now known as Engineering Online, the program eliminates the barriers of attending classes at a physical campus and engages students around the world, providing distance engineering and computer science courses for both academic credit and professional development.

SPRING 2014 ENGINEERING ONLINE STUDENTS

Michael Hill | ISE alumnus, Non-Degree Studies, pursuing Master of Engineering
Schaefer Systems International, Charlotte, NC

In my current role, I travel frequently both domestically and internationally. It’s important to note that with the ease of access and flexibility, the quality of course material does not suffer.

Jane Monnier | Master of Engineering
Design engineer with Parker-Hannifin, Mobile Cylinder Division, military spouse and mom, Little Rock, Ark.

I’ve been allowed to pursue my career goals through higher education during a period of change in my family — what could have been a gap on my resume.

SPRING 2014 BY THE NUMBERS

403 out-of-state and international students enrolled in at least one class
711 students enrolled in at least one class
30 average student age
24 countries

US Enrollment By State

NC Enrollment By County

NUMBER OF ENROLLED STUDENTS
None or not listed
Fewer than 10
10-20
More than 20

Captain Christopher T. Denzer | Master of Aerospace Engineering

Accomplishing classes while deployed could not have been easier. I have recommended this program to every one of my young officers that are interested in a master’s in engineering and have to balance workload with the operations tempo of combat airlift.

Forty international students represent 24 countries. Canada, India and Nigeria are among them.
