01/29/08 2nd Annual NC Mobile Clean Air & Renewable Energy Awards

RALEIGH, N.C. – The NC Solar Center at North Carolina State University, along with project partners Triangle Clean Cities and Centralina Clean Fuels Coalition, announced today the second annual Mobile Clean Air Renewable Energy (CARE) symposium and awards. The Mobile CARE awards will honor individuals, product providers, fleets, and policy/organizational innovations that are advancing alternative fuel and transportation technology activities in North Carolina. Nominations will be accepted until April 4, 2008. A review panel from the NC Department of Transportation, Division of Air Quality and State Energy Office will make the selection of award recipients. Awards will be presented May 6, 2007 at The 2nd Annual Mobile CARE Symposium and Awards, to be held at the Proximity Hotel in Greensboro, N.C.

In addition to recognizing outstanding efforts at reducing transportation related emissions, the Solar Center's Clean Transportation Program is hosting the symposium as a part of the 2008 Year of Energy at North Carolina State University. Symposium participants will have an opportunity to learn about a range of transportation, energy, and air quality topics that highlight the latest in research, demonstration, and deployment in North Carolina. A call for presentations is underway now seeking speakers to share cutting edge information and activities. Presentation proposals will be accepted until February 29, 2008 and will be selected based on developing a well rounded representation on the many activities involving transportation, air quality and energy going on in North Carolina. Mobile CARE Symposium Call for Presentations application, award nomination guidelines and award applications are available under events at: www.cleantransportation.org

About the Clean Fuel Advanced Technology Project: A three year, \$2 million dollar initiative of the Clean Transportation Program at the NC Solar Center (NCSC) funded by the State Energy Office, Division of Air Quality and federal Congestion Mitigation Air Quality (CMAQ) funds administered by NCDOT to provide educational outreach and emission reductions in 24 NC counties that do not meet national ambient air quality standards. The NCSC has partnered with the Triangle Clean Cities and Centralina Clean Fuels Coalitions to conduct outreach in the Triangle and Charlotte Regions.

About the NC Solar Center: Based in the College of Engineering at N.C. State University, the NC Solar Center has operated since 1988 as a clearinghouse for information, demonstration, research, and training related to renewable and advanced technologies. The Clean Transportation Program began in 2004 and focuses on promoting the use of alternative fuels and advanced transportation technologies to reduce emissions and diversify fuel supplies.
