**Night Counselor:** (June 11-July 2, 2010) Counselors for our summer programs are primarily responsible for the nightly activities provided during a participant's stay. Each counselor is assigned a group of ~10 students for the duration of the week. Collectively, the counselors will oversee nightly recreational/academic activities (i.e. sports, laser-tag, WRAL, movie, games). Each counselor will also help with check-in and check-out and will assist in delivering students to departments each morning. A good counselor will be a very outgoing and motivated person who loves to meet new people and work with a group. Counselors will spend each night getting to know the students, and facilitating interaction between the participants. An extremely large portion of this program's success depends on the counselors' ability to make the participants' time here memorable. The entire program will be housed in University Towers and counselors are required to be there overnight during the program week. Counselors receive \$350.00 per week plus meal plan and housing. Undergraduate students, especially freshmen and sophomores, are highly encouraged to apply.

Mark

**Department Experience Coordinator:** Departmental Experience Coordinators will work with one department to help develop and execute that department's contribution to the Summer Program's agenda. Most Engineering departments offer a weeklong experience for students who come to explore that department (June 14-17, June 21-25, June 28-July 2 – most workshop positions require one week of preparation prior to the workshop). The Department Experience Coordinator will assist faculty in the department to develop and execute these programs. Students applying for this position should be eager to work with high school students, and HIGHLY self motivated. Compensation and workload will vary by department. Please list the **department** you are interested in:
