Systems Engineering Process

Problem Definition

NC STATE UNIVERSITY COLLEGE OF ENGINEERING

Problem

Design a Universal Proofloader that:

- Safely Load Tests Various Lifting Slings In Designed Configuration
- Eliminates The Need For Proofload Adapters and Static Weights
- Loads In 10 Pound Increments
- Is Self Contained
- Design Must Be Completed By April 25, 2016

What is a Sling?

449-240-129-101 SLING ASSEMBLY, UNIVERSAL
(WP 003 16)

70073-85000-013 Sling, Universal Lifting
WP 003 04

65720-70018-041 SLING, DOCKSIDE LOADING
WP 007 23

What is Proofloading and Why?

- Loading Slings to Test Reliability
- Must be done
 - At Manufacture
 - After Major Structural Repair

Problem

Design a Universal Proofloader that:

- Safely Load Tests Various Lifting Slings In Designed Configuration
- Eliminates The Need For Proofload Adapters and Static Weights
- Loads In 10 Pound Increments
- Is Self Contained
- Design Must Be Completed By April 25, 2016

Requirements Definition

NC STATE UNIVERSITY COLLEGE OF ENGINEERING

Needs Statement

A Universal Sling Proof Loader (UPL) to apply a load to slings, in their usage configuration, up to 130,000 pounds.

Functional Block Diagram

Universal Proof Loader (UPL)			
Connect to Slings: <ul style="list-style-type: none">• Connect to top of sling• Connect to bottom of sling:<ul style="list-style-type: none">• Baskets• Pins• Bolts• Shackles• Chain loops• Hooks	Position Sling Connections: <ul style="list-style-type: none">• Adjustable<ul style="list-style-type: none">• Adjustable in length and width• Adjustable in Height by extension frames or chains• Fixed	Load Slings: <ul style="list-style-type: none">• Apply a load• Resist the load• Measure a load• Measure elapsed time• <i>Would LIKE to: Measure the load in each leg</i>	Safety: <ul style="list-style-type: none">• Keep operator and bystanders safe• Absorb energy from sling failure

Current Proofloading Capabilities

- Calculated method for prooftesting slings with dead weights, up to 6,000 lbs.
- Straight pulls up to 120,000 lbs.

449-240-129-101 SLING ASSEMBLY, UNIVERSAL
(WP 003 16)

Database

SWE13833 SLING, ASSEMBLY
(WP 004 05)

PWC70079 SLING-LIFTING, ENGINE ASSEMBLY
(WP 004 06)

Figure 1. Sling Pictorial Index

Sling Definition

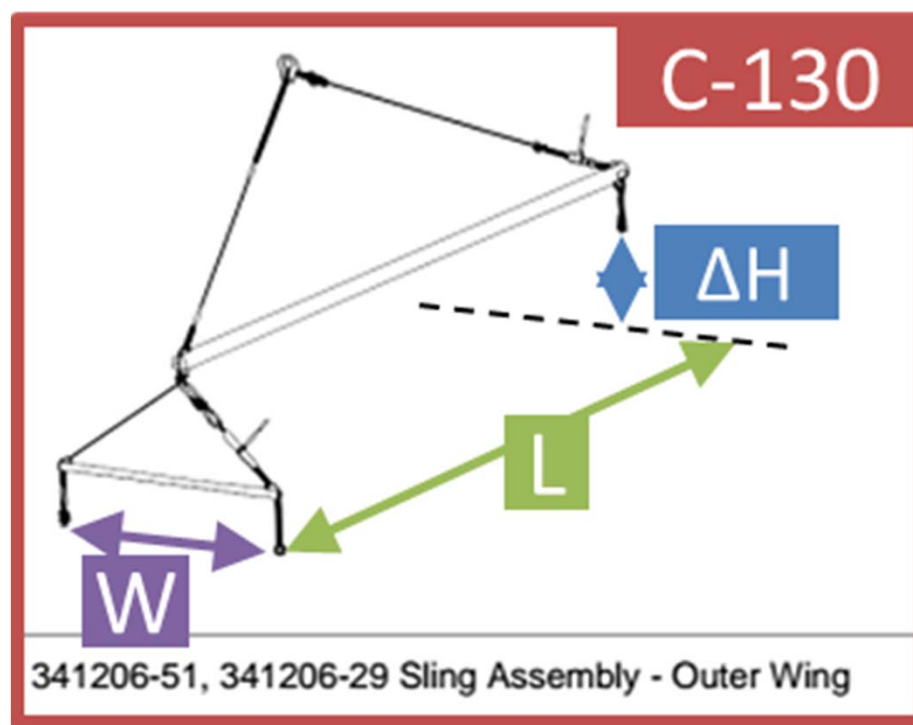

Slings are defined by the following variables

- Proofload Requirement (100-130,000lbs)
- Dimensions
 - Height (from hook to lowest)
 - Length (longer horiz. dim)
 - Width (shorter horiz. dim)
 - Height Eccentricity (Δ H of connections)
- Connections
 - Quantity (1-5)
 - Type(s) (Pins, Bolts, Shackles...)
- Frame Use and Size (spreader bars etc.)

Sling Dimensions

- Height
(from hook to lowest)
- Length
(longer horiz. dim)
- Width
(shorter horiz. dim)
- Height Eccentricity
(ΔH of connections)

Sling Size Considerations

Slings below set the size of the Universal Proofloader (UPL)

Max Height

16'x7'x20' 46,800 lbs

Max Length and Width

38'x25'x17' 96,000 lbs

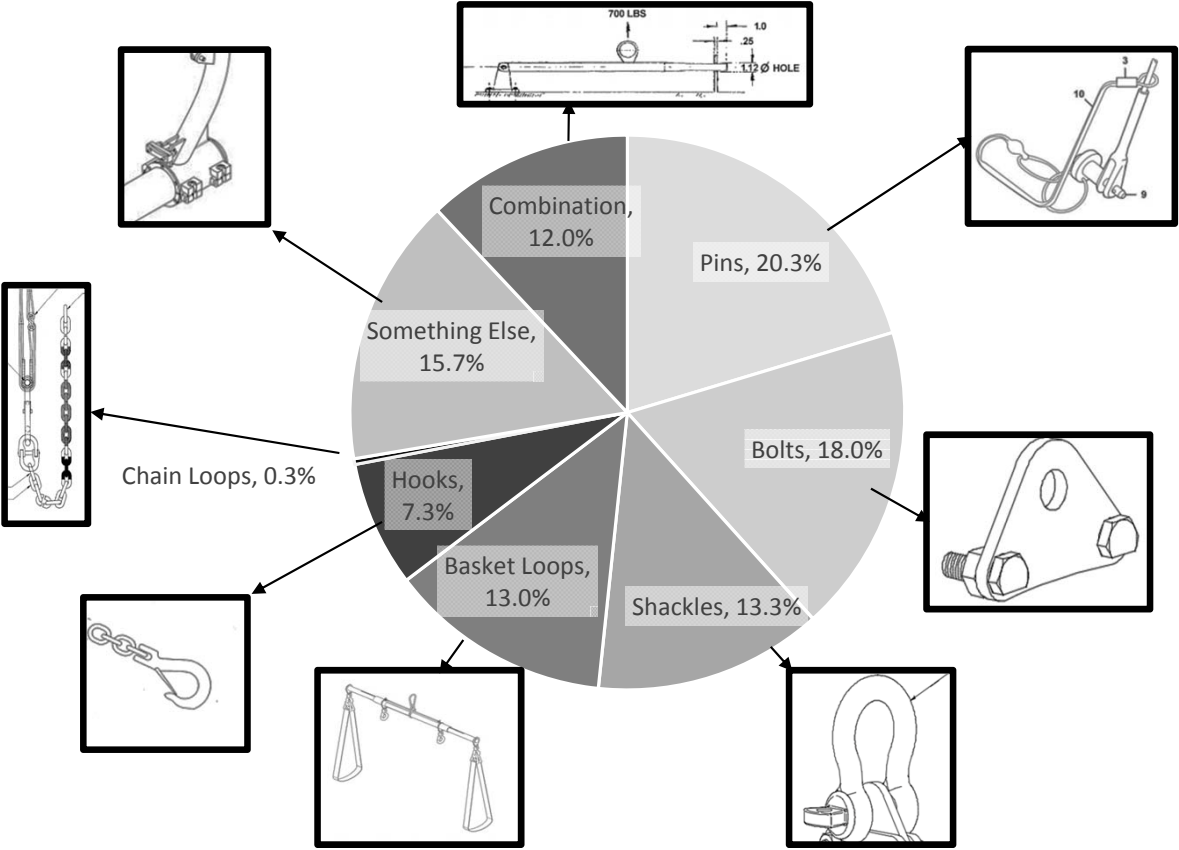

XY Plot (looking down)

Sling Connections

Sling Proofload Requirements

0-10,000 lbs
were placed
in 1,000 lb
bins.

10,000 lbs +
were put in
10,000 lb
bins.

Requirements

Need	Req #	Sub-Req #	Description
1	0	0	1.0 The Universal Proof Loader (UPL) design shall connect to all slings listed in the interface document in the same configuration as when in normal use.
1	1	0	The UPL design shall have a means to connect to the top of the slings as stated in the interface document.
1	2	0	The UPL design shall have a means to connect to the bottom of the slings as stated in the interface document.
1	3	0	The UPL design shall have a means to connect to slings of various sizes as stated in the interface document.
1	4	0	The UPL design shall accommodate sling frames as stated in the interface document.
1	5	0	The UPL design shall assist in connecting to the top of the sling.

Specifications

- 130,000 lbs. on 4 legs
- 97,500 lbs. on 3 legs
- 65,000 lbs. on 2 legs
- 130,000 lbs. straight pull
- 40-90° from horizontal
- 0-25° from plane of leg

Measures of Effectiveness

- Safety
- Reliability
- Percentage Loaded
- Connection Accuracy
- Turn Around Time
- Cost

Importance of the Systems Engineering Process

How the customer explained it

How the Project Leader understood it

How the System Analyst designed it

How the Programmer wrote it

How the Business Consultant described it

How the project was documented

What operations installed

How the customer was billed

How it was supported

What the customer really needed

Detailed Design

NC STATE UNIVERSITY COLLEGE OF ENGINEERING

Detailed Design

• What is detailed design?

- Stresses
- Safety Factor
- Ease of use
- Manufacturing
- Drawings

Process

Sam's Subsystem

NC STATE UNIVERSITY COLLEGE OF ENGINEERING

Pin Adapter

- Reduces total number of adapters
- Previously made out of 4130 steel

Adapters – Pins Calculations

Inner Tabs						
S/N	Pin Diameter (in) D	Length (in) L	Width (in) W	Bearing Stress (psi)	Safety Factor (Ultimate)	Tab Height (in) H
65720-700787-041	0.64	1.277	1	-779	77.03	1.9
T101897	0.625	0.760	1	-5,182	11.58	1.8
T101610	0.563	0.180	1	-5,905	10.16	1.7
65720-70005-041	0.453	0.880	1	-1,357	44.20	1.4
CPWA30804	0.437	0.625	1	-2,331	25.74	1.3
6798116	0.4	0.255	1	-6,241	9.61	1.3
70700-77408-046	0.312	2.507	1	-1,058	56.71	1.0
6797692	0.311	0.641	1	-12,781	4.69	1.0
65700-70020-041	0.261	1.647	1	-1,333	45.02	0.9

Adapters – Pins Calculations

S/N	Base Perimeter	Weld Thickness (in)	Weld Area (in ²)	PSI	Weld Material Strength (U)	Load for 5:1
65720-700787-041	4.554	1	0.5	439	586	2,928
T101897	3.52	1	0.5	2,197	2,929	14,646
T101610	2.36	1	0.5	797	1,062	5,311
65720-70005-041	3.76	1	0.5	452	603	3,014
CPWA30804	3.25	1	0.5	615	821	4,103
6798116	2.51	1	0.5	797	1,062	5,312
70700-77408-046	7.014	1	0.5	371	494	2,471
6797692	3.28125	1	0.5	2,438	3,251	16,254
65700-70020-041	5.294	1	0.5	340	453	2,267

- If a one inch weld is used around the base of each tab, the minimum strength needed in the weld is 16,000 psi
- This force is well under the strength of the weld material that will be used.

Center Structure

NC STATE UNIVERSITY COLLEGE OF ENGINEERING

Center Structure

- The load is transferred down to I-Beams that push up against the feet of the gantries.
- This enables the gantry system to pull against itself, creating a self contained system.

Center Structure – Tube Adapter

- Tube adapter is 1025 steel and is welded to tube with ER70
- Challenging

Tube Adapter		
Shear		
Allowable (U)	61,125	psi
SF	9.60	
Bearing Stress		
Allowable (U)	81,500	psi
SF	12.80

Added Capabilities

Our Universal Proofloader Will:

- Proofload all known slings in their usage configuration.
 - No more contracting out proofloading of slings.
 - No more time lost shipping slings to other FRC locations.
